

**Antikeylogger01** – adapter cable with SOIC-16Pin-chip package built in

**Overview :**

**Antikeylogger01** security adapter cable, it contains a key IC 8-Bit MCU, encryption calculator, 8K Bytes Flash, SRAM, USB 1.1 controller and PS2 controller circuit, with the software integrated encryption technology, can prevent the network hackers or other malicious software(Keylogger) to steal personal information. This is a SOIC-16Pin package built in the USB/PS2 adapter cable, is the low-cost but high security encryption and practical solution for end user to make safely online transaction every time.

**Specification :**

- Embedded 8bit MCU and H/W Encrypt
  - USB 2.0, USB HID 1.1 Interface
  - Embedded RAM 256 Bytes
  - Embedded Flash 8KB
  - Internal 12 MHz Oscillator
  - 3/5V I/O with Pull-up Resistor
  - Operating Temperature : 0~70°C
  - Operating Voltage : 4.5~5.5V
  - Package: SOIC-16 pin
- \*Bundled with software driver CD

**Application :**

Due to personal computer hardware and software's natural limitation, the hacker attacked this leakage through keylogger software by Trojan virus to hook the keystrokes data very easily, **if the keystrokes data is credit card number, online banking ID and password, or other important data stored in cloud, the actual loss could be a lot once stolen.** **Antikeylogger01** security adapter cable is

the best solution, it can guard your keystrokes data from online banking, shopping, gaming and instant messenger communicating..! We launched this security adapter cable not only apply in current application but also in cloud computing application. [It is the first anti-keylogger solution by hardware and software together](#) and it is the only proactive solution for anti-keylogger who can secure the data input in cloud computing for end user. This solution has passed more than 50 keyboard logging software (Keylogger) tests, all the testing result is positive. Compared to other anti-keylogger with software-only solution, ours is the best choice no doubt.

This security solution has also won the third place in the Buyers' Choice product awards at the [2010 Taipei International Computer Show \(Computex 2010\)](#). The AES's core algorithm of OK100 was also certificated by CAVP( Cryptographic Algorithm Validation Program ) of NIST( National Institute of Standards and Technology ) in February of this year.

Antikeylogger01 is an USB or PS2 adapter cable with SOIC-16Pin-chip package built in, for connecting keyboard to PC, very easy to install the hardware & software, no technical background is need. Once installed every sensitive data is now under fulltime & solid protecting.
